The Honorable Robert F. Kennedy, Jr.
Secretary of Health and Human Services
U.S. Department of Health and Human Services
200 Independence Avenue, S.W.
Washington, D.C. 20201

Dear Secretary Kennedy:

I have been working on a novel method to ascertain whether or not vaccines cause autism.

Unlike studies which have been published over decades in the scientific literature, this new method is **extremely sensitive** and highly selective to answering the question.

It collects **just ONE number per qualifying subject**. That number is non-identifiable and HIPAA compliant. So the full **dataset can be made public** for all to validate.

The data collection can be accomplished by asking a autism treatment or diagnostic clinics and large pediatric medical practices. Having all 3 clinic types converging to the same result increases confidence. With just 100 records total, we can get extremely high statistical significance because the signal is huge. Data collection is straightforward.

In short, we've always been able to find the answer to this age-old question. **What we lack is the political will** to request the data. We seem to not want to know the answer.

I know this works. I have the collected numbers from an autism treatment clinic with approximately 1,000 patients and 40% of the sudden onset regressive autism (SORA) cases happened within 2 days AFTER the nearest vaccine.

I also have a large number of followers. 19 parents provided data on their SORA children. 7/19 parents reported SORA onset within 2 days AFTER the nearest vaccine, a 37% rate which nearly matched the 40% rate in the treatment clinic.

Bottom line: **the method was replicated** across different populations and different countries with the same outcome. And the method cannot be credibly attacked. There is no selection bias, no ascertainment bias, nothing to create FUD. It's very consistent.

I would be happy to share with anyone at NIH or CDC the details on how to do collect the data needed. You'd have the answer within 5 business days or less from when you start.

Sincerely yours,

A handwritten signature in black ink that reads "Steve Kirsch". The signature is written in a cursive, flowing style.
